PART IV: HUMAN RIGHTS MONITORING	112-115
PART V: COUNTY AND CONSTITUENCY MONITORING ..	116-120

FOREWORD

The Second Handbook of National Reporting Indicators has been produced by the Ministry of Devolution and Planning in collaboration with other stakeholders for tracking the progress of implementation of the Second Medium Term Plan (2013-2017). The handbook is designed to increase accountability and transparency by providing an easy reference to the key national economic, social and governance performance outcome indicators, flagship projects annualized output indicators, gender monitoring indicators, human rights indicators and county performance indicators.

In preparing the handbook, the Ministry of Devolution and Planning, has taken into consideration the Kenya Constitution, 2010 that brought in new changes in the way the government delivers its services especially with the introduction of devolution as well as the centrality of the principle of public participation in development affairs.

The handbook is intended to be a guide for all Public Sector Institutions, from top management responsible for overall policy formulation and implementation and general oversight, to lowest level cadre responsible for the actual implementation of the policies, programmes and projects.

It is therefore a very useful tool for tracking the progress of implementation and reporting on the performance of specific indicators for the Second Medium Term Plan (2013-2017). The handbook also took into consideration, the SMART principle in selection of indicators to ensure that the indicators are simple, measurable, accurate, realistic and time-bound to ensure accurate level of reporting of development trends in the country.

The handbook is also intended for the citizens to engage with both the national and county governments on developmental issues. It can be used by the citizens to interrogate the impact of the developmental policies, programmes and projects being implemented at the national and county governments.

It is also useful to the legislators and other arms of government that

are tasked with implementation of programmes aimed at realizing the goals of Kenya Vision 2030. State officers and academia, policy and research bodies as well as civil society organizations, the private sector and development partners would find it a useful guide in looking at the government plans and any progress on delivery of these plans.

This second handbook for the Second MTP (2013-2017) has benefitted a lot from the first handbook of national reporting indicators. It is more comprehensive in coverage than other previous tools used in monitoring government plans.

The handbook is divided into five parts. Part one consists of seventy-one indicators for monitoring forty-nine key national outcomes selected to reflect the main aspects of the Second MTP 2013-2017, Part two consists of monitoring framework for the flagship projects, part three comprises of the gender monitoring framework, part four consists of human rights indicators and Part five consists of indicators for the county and constituency monitoring,

In line with the constitutional mandate of county governments, as elaborated in Schedule 4 of the constitution, several development functions previously in the docket of the national government have been devolved to the county governments these include: pre-primary education, agriculture, trade development and regulation, water and sanitation as well as county health services among others.

The county governments receive at least 15% of the national revenue in order to provide these services. This handbook addresses itself to this shift, and instead of considering district based indicators, gives attention to county and constituency monitoring indicators. It is believed that this shift will also attract strengthened response from county stakeholders concerned with development tracking at that level.

As is the case, users of the handbook will continue to note that each flagship project has been broken down into annual implementation components. The flagship projects are monitored closely, and the implementing ministries require quarterly reporting on their progress.

As such, the layout of the projects in the handbook should stir distinct

interest in monitoring the projects, and allow feedback to the executing ministries so that they can keep their progress on track such that where additional attention is required, including financial mobilization, appropriate measures can be taken by relevant national departments so that their implementation do not lag behind.

It is my sincere hope that this handbook will be used widely and disseminated both at the national and county governments. The government will work with likeminded stakeholders in order to foster a broader use of the document in keeping it accountable and right on track.

I trust that this collaboration will be carried out in a healthy and respectable manner to ensure that effective feedback is made to government, and where possible, remedial actions are taken to keep our development on track.

Anne Waiguru, OGW

Cabinet Secretary

Ministry of Devolution and Planning

ACKNOWLEDGEMENTS

The Ministry of Devolution and Planning plays a key and strategic role within the overall structure of government. Its mandate is to facilitate and coordinate the national development planning process, oversee the implementation of Kenya Vision 2030 and to provide leadership in the implementation of economic policies.

The Ministry's functions include the provision of leadership and coordination in preparation of the main national development plan documents and coordination and provision of leadership in the national Monitoring and Evaluation (M&E) framework and the Annual Progress Reports among other functions.

It is in keeping with this mandate that the Ministry in consultation with key stakeholders prepared the Second handbook of national reporting indicators. The Second handbook of national reporting indicators will be used in tracking the progress of implementation of the Second Medium Term Plan (2013-2017).

The second handbook greatly benefitted from the First handbook of national reporting indicators that was developed to track the progress of implementation of the First Medium Term Plan (2008-2012).

To identify outcomes, indicators and targets for the handbook, ministries used their existing Monitoring and Evaluation (M&E) frameworks, work plans with key outcomes of their development programmes and related output, activities and input and strategic plans.

Stakeholder forums were also convened where participants provided valuable inputs towards finalization of this handbook for the Second MTP (2013-2017). In this regard, I would therefore wish to thank the various technical committees from line ministries and counties that provided the outcomes, indicators and targets that went into the handbook.

Special thanks also go to many stakeholders who contributed immensely towards development of this handbook and I look forward to continued

collaboration with them in this endeavor.

I would also like to specifically mention the contribution of the Economic Planning Secretary, Mr. Stephen Wainaina, MBS, and the Director of Monitoring and Evaluation Department, Mr. Samson Machuka, whose able leadership and supervision made the successful completion of this assignment possible.

Special thanks go to Mr. Hezbourne Mackobongo, Deputy Chief Economist, who has demonstrated commitment in the editing and timely finalization of this second handbook of national reporting indicators. The list of persons, to whom the ministry owes gratitude, is endless.

I therefore take this opportunity to thank all those who, in very diverse ways, made production of this Second handbook of national reporting indicators successful.

The second handbook of national reporting indicators can be found on the Ministry of Devolution and Planning website (www.devolutionplanning.go.ke).

Eng. Peter O. Mangiti

Principal Secretary

Ministry of Devolution and Planning

INTRODUCTION

Kenya's past policies, development programmes and projects as envisaged in the First MTP and Kenya Vision 2030 have had significant impacts on the citizens for the last one-and-half decade. This has been partly attributed to the establishment and operationalization of a monitoring and evaluation framework. Effective monitoring and evaluation system facilitates tracking of progress and assessment of status of implementation of key policies, programmes and projects and provides mitigation measures for the challenges.

Successful implementation of the Kenya Vision 2030 and the MTPs require an efficient and effective National Monitoring, Evaluation and Reporting (MER) System. The National Integrated Monitoring and Evaluation System (NIMES), is therefore very critical for the country to achieve a middle income economy status by 2030.

It is in light of this that the country developed thirty-one national level monitoring indicators for tracking the progress of implementation of the Economic Recovery Strategy (ERS). With the expiry of the Economic Recovery Strategy (ERS), the government introduced the First Medium Term Plan, with more comprehensive targets for development.

The handbook for monitoring the First Medium Term Plan (MTP), consisted of sixty five indicators for monitoring forty-eight key outcomes selected to reflect the main aspects of the MTP that is macroeconomic stability, socio-economic transformation, investing in the people of Kenya, moving the economy up the value chain and transformation of Kenya Political governance systems.

Part II was the monitoring framework for the flagship projects for the MTP while part III comprised indicators for District and Constituency Monitoring. The last element in the handbook covered the gender monitoring framework, restating the government's commitment to promotion of gender equity in participation in the labor market, school enrolment and access to development services.

This second handbook for the Second MTP (2013-2017) is more comprehensive in coverage than other previous tools used in monitoring

government plans. The handbook is divided into five parts. Part one consists of seventy-one indicators for monitoring forty-nine key national outcomes selected to reflect the main aspects of the Second MTP 2013-2017, Part two consisted of monitoring framework for the flagship projects, Part three consisted of indicators for the county and constituency monitoring, part four comprises of the gender monitoring framework and part five consists of human rights indicators.

Users of the second handbook will continue to note that each flagship project has been broken down into annual implementation components. The flagship projects are monitored closely, and the implementing ministries require quarterly reporting on their progress. As such, the layout of the projects in the handbook should stir distinct interest in monitoring the projects, and allow feedback to the executing ministries so that they can keep their progress on track such that where additional attention is required, including financial mobilization, appropriate measures can be taken by relevant national departments so that their implementation do not lag behind.

This second handbook closely derives from the previous one so as to provide continuity in the effective tracking of progress towards poverty reduction, macroeconomic progress, socio-economic transformation and progress in line with the government goals. The outcome indicators will be tracked through a series of reports produced at the end of each financial year, under the National Integrated Monitoring and Evaluation Systems (NIMES) while the outcome monitoring indicators and reports on Flagship projects will highlight the development activities identified under the respective ministries as flagships. Reports on the Flagship projects will however be produced with greater frequency by the Vision Delivery Secretariat (VDS), at least every quarterly, for informing its board and for other strategic decision making purposes.

In terms of county and constituency indicators, the handbook presents a set of carefully chosen key indicators that would highlight the role of devolved governments and constituencies in local development. County governments control at least 15% of all the national revenue. They are responsible for local trade development and regulation, Agriculture, pre-primary education, water and sanitation as well the reticulation of electricity among other functions. Many of the county governments have also set up special funds to support some of these sectors. On the other hand, constituency representatives have significant role to play concerning

such national funds such as the Constituency Development Fund, the Equalization Fund as well as the UWEZO fund.

Reports based on county and constituency development indicators will go a long way to reveal differentials in development, a concern that may require further resources. Monitoring development at this level would encourage local participation in national issues, and further complement national accountability efforts towards responsible fiscal management in the new devolved governments.

This would similarly apply to public resources controlled at the constituency level for development interventions relating to health, education and infrastructure development among others. The constituency reports for instance needs to be disseminated widely to local Members of Parliament, government officers and NGOs operating in the areas in fostering openness and peer reviews. The officers from the Ministry of Devolution and Planning will be responsible for all data aggregation and the production of constituency semi-annual reports. The representatives of national government responsible for coordination of county activities are expected to take further roles in the dissemination and validation of the emerging reports.

To catalyze national efforts towards gender monitoring and the realization of human rights, the two subjects have been widely discussed in the handbook as well. The gender monitoring framework will assist stakeholders explore differentials in development in as far as they affect boys and girls or women and men of this country. Further research into relevant baseline data and situational issues is to be generated for these two areas that are relatively still developing within the national development discourse.

Kenya is committed to the improvement of its human rights standing as well as gender advancement goals in line with its national and international obligations. Reports on the gender framework as well as human rights development are expected to be produced annually, but more important, the themes should generate further policy analysis and measures to promote them.

This handbook therefore provides the benchmark for a series of monitoring reports that is annual Reports on Vision 2030 MTP outcomes, the Quarterly Flagship Project Reports, the Semi-annual Constituency Reports and the Quarterly Constituency Financial Reports. These reports are part of the

reporting obligations by Public Institutions and NGOs under the National Monitoring and Evaluation framework.

The second Medium Term Plan (2013-2017) outlines the policies, programs and projects which the Jubilee government intends to implement during its five year term in order to deliver accelerated and inclusive economic growth, higher living standards, better education and health care, increased job creation, commercialized agriculture, improved manufacturing sector as well as more diversified export in line with its manifesto.

The plan will facilitate the realization of Kenya Vision 2030. The MTP is implemented through a series of Ministerial Strategic Plans with their own results framework for achieving the goals of Vision 2030. The operational link to the ministerial results frameworks are the performance contracts signed by all the CEOs and accounting officers and this second handbook of national reporting indicators.

This handbook is therefore a significant pillar in the performance monitoring of the realization of the Vision 2030 goals. It forms the basis of formulating performance contracts of the public sector institutions since in its development, public officers have been part and parcel of the thinking and the consensus building process. The Handbook actually establishes agreed parameters for ministerial priorities in the national development plan and offers to have their performances at these levels tracked down for effective delivery.

Finally, it should be noted that the second MTP included new priority areas, particularly the development of oil and other mineral resources under the economic pillar. Kenya has recently discovered oil resources as well as deposits of coal, iron ore and other rare earth minerals.

Mineral exports are expected to shore up national revenue as well as help close Kenya's balance of trade and all these new areas are included in this second handbook of national reporting indicators. The handbook therefore will play a major role in understanding the degree of effectiveness of the development policies of the government and performance of those responsible for delivering on the Vision 2030.
